

JS Formula generates the following error message:

The screenshot shows a software interface with a modal dialog box at the top. The dialog box contains the following text:

Auf [redacted] wird Folgendes angezeigt
Error of formula calculation:
field_886+IFNULL(app_get_choices_values(field_686),0)
ReferenceError: IFNULL is not defined

Below the dialog box, the main interface is visible. It has a title bar "Einträge" and a navigation menu with tabs: "Eintragstyp", "Info", "Gewerke & Zuständigkeiten", "Termine, Fortschritt & Status", and "Beschreibung & Dateien".

The "Eintragstyp" tab is active, showing a list of radio button options:

- Aufgabe (mit Fristen)
- Mangelrüge (mit Fristen)
- Vormerkung (mit Fristen)
- Sonstiger Vorgang (mit Fristen)
- Aktennotiz (keine Fristen)
- Warnschreiben (keine Fristen)
- Sonst. Schreiben (keine Fristen)

Below the list, there are three input fields:

- JS NumInput A [886]: A numeric input field containing a vertical line cursor. This field is circled in red.
- JS NumInput B [887]: A numeric input field containing the value "2".
- JS Formula get_value from Maueller Status: A text field containing the value "4.00" and the formula "[886]+IFNULL(get_value([686]),0)". This field is also circled in red.

At the bottom right of the interface, there are two buttons: "Save" and "Close".

I tried to inset the number 4 into JS Numinput A [886] which is a numeric input field. I have copied the formula into the tool tip field so you can see it on the form. I cannot find the problem.

The `get_value` functions calls list field [686] including numerical values:
